Assignment 4 – State and User Interaction in Jetpack Compose

https://developer.android.com/courses/pathways/android-basics-compose-unit-2-pathway-3

1. Required Codelabs and Project

You must complete all required codelabs and the final project:

1. **Intro to state in Compose** – Complete all codelab tasks.
2. **Calculate a custom tip** – Complete all codelab tasks.
3. **Write automated tests** – Complete all codelab tasks.
4. **Project: Create an Art Space app** – Complete the entire project according to the provided requirements.

The two introductory videos are optional.

2. Task Requirements

- Complete **every task and exercise** included in each codelab.
- Complete all required features and functionality in the **Art Space project**.
- If a codelab or project contains additional practice tasks, you must complete them.
- Before implementing each practice task, add a **commit** describing what the task requires.
- Ensure all applications work correctly.

3. Git Commit Requirements

- Make an `initial commit` before starting.
- Create separate commits for each meaningful step in the codelabs and project.
- Commit each completed practice task separately.
- Use descriptive commit messages, such as `hw4 codelab1 - implement state`, `hw4 codelab2 - calculate custom tip`, or `hw4 project - add navigation`.
- **Make enough meaningful commits to clearly demonstrate your development process.** One or two commits for the entire assignment are not acceptable.
- Push all commits to GitHub.

4. Submission and Defense

Submit your GitHub repository link and screenshots of the completed applications through Moodle.During the defense, you must demonstrate your work, explain your code, and answer questions about the codelabs and project.

Late submission penalty: 25%. Assignments submitted more than 4 weeks after the deadline will receive no points.
